1:32 Scale 14 Ton Tank Wagons

The earliest tank wagons on Britain's railways were rectangular affairs, little more than a metal box on a wooden framed chassis. This type of vehicle presented stability issues because the large surface area to volume ratio allowed the fluid contained to 'slop' from end to end or side to side. It was found that a cylindrical tank (as long as it was full) reduced this tendency because of the smaller surface area and from the turn of the 20th century these wagons became the norm for the conveyance of liquids.

This 14-ton petrol tanker features injection moulded bodies sitting on cast metal, sprung chassis, sprung buffers, sprung couplings as well as insulated wheels. This factory built 1/32 scale wagon is the perfect item of low cost rolling stock to complement any Gauge 1 railway.
